Total Time	
Elements	<u>Standards</u>
PREREQUSITES	<u></u>
Verify reactor is operating steady state	1. Yes, given in Initial Conditions
CUE: Loop A and B flows are matched	
2. Verify Jet Pumps (1-10) Loop B and Jet Pumps (11-20) are matched in 2 loop operation	2. Loop A and B flows are verified
3. Verify Post Accident Sampling system sampling is not in progress	3. Not in progress, given in Initial Conditions
<b>NOTE</b> (1) The preferred methods to obtain Loop Drive F R614 blue pen and B31-R614 red pen. Drive Flow Indica alternate indication if the flow recorders are not available.	
<b>NOTE</b> (2) The preferred method to obtain Total Core Flo IPCS Core Power and Flow Report may be used to indicat <b>flag</b> =2 when using IPCS.	
Two Recirculation Loop Drive Flow Deviation Verification	
CUE: Recirc Loop A Flow is 36 Kgpm	
<ol> <li>Record operating value of Recirculation Loop A         Drive Flow from B31-R614, Recirc Loops Flow             Recorder, Blue Pen     </li> </ol>	4. Records B31-R614, Recirc Loops Flow Recorder, Blue Pen reading and initials
CUE: Recirc Pump A Speed is 73%	
<ol> <li>Record operating value of Recirculation Pump A Speed from C32-K816, FW and RR Flat Panel Display</li> </ol>	<ol><li>Records C32-K816, FW and RR Flat Panel Display reading and initials</li></ol>
CUE: Recirc Loop B Flow is 38 Kgpm	
<ol> <li>Record operating value of Recirculation Loop B         Drive Flow from B31-R614, Recirc Loops Flow         Recorder, Red Pen     </li> </ol>	6. Records B31-R614, Recirc Loops Flow Recorder, Red Pen reading and initials
CUE: Recirc Pump B Speed is 75%	
<ol> <li>Record operating value of Recirculation Pump B Speed from C32-K816, FW and RR Flat Panel Display</li> </ol>	7. Records C32-K816, FW and RR Flat Panel Display reading and initials
*8. Using the data from Steps 4 and 5, plot and verify point is between -10% and +10% curve on Attachment 1	*8. Verified point is between -10% and +10% curve on Attachment 1
*9. Using the data from Steps 6 and 7, plot and verify point is between -10% and +10% curve on Attachment 2	*9. Verified point is between -10% and +10% curve on Attachment 2
Note: Given in Initial Conditions	
10. Record Reactor Power	10. Records Reactor Power as 100%
11. Record test personnel	11. Prints name, initials and signs.

NRC Exam 2004-301-A1.1

NRC Exam 2004	-301-A1.1
Jet Pump Operability Test	No.: NRC Exam 2004-301-A1.1 Revision: 0 Page 3
Two Recirculation Loop Drive Flow Deviation Verification	
NOTE: All indicators are on COP H11-P603	
CUE: Total core flow is 85.3 Mlb/hr	
12. Record total core flow indication from B21-R613, Reactor Core Dp & jet Pump Total Flow Rec, Red Pen	12. Records B21-R613, Reactor Core Dp & jet Pump Total Flow Red Pen and initials.
CUE: Core dP is 11.5 PSID	
13. Record core differential pressure from B21-R613, Reactor Core Dp & jet Pump Total Flow Rec, Blue Pen	13. Records B21-R613, Reactor Core Dp & jet Pump Total Flow Rec, Blue Pen and initials
CUE: Recirc Loop A Flow is 36 Kgpm	
<ol> <li>Record Recirculation Loop A Drive Flow from B31-R614, Recirc Loops Flow Recorder, Blue Pen</li> </ol>	<ol> <li>Records B31-R614, Recirc Loops Flow Recorder, Blue Pen and initials</li> </ol>
CUE: Recirc Loop B Flow is 38 Kgpm	
<ol> <li>Record Recirculation Loop B Drive Flow from B31-R614, Recirc Loops Flow Recorder, Red Pen</li> </ol>	<ol> <li>Records B31-R614, Recirc Loops Flow Recorder, Red Pen and initials</li> </ol>
*16. Calculate Total Recirculation Loop Drive Flow below by adding recorded values of Recirculation Loop A and Loop B Drive Flows.	*16. Calculates Total Recirc Drive Flow as 74 Kgpm and initials
*17. Using the data from Steps 12 and 13, plot and verify point is between -10% and +10% curve on Attachment 3	*17. Verified point is between –10% and +10% curve on Attachment 3
CUE: Reactor Power is 100%, Rod Line is 109.5%	
18. Record Reactor power and rod line.	18. Power and Rod line are recorded and initialed.
19. Record test personnel	19. Prints name, initials and signs.
Jet Pump Differential Pressure Deviation Verification	
<b>NOTE:</b> Steps 20 through 23 are only required if the Recirculation Loop A is in operation. Otherwise, NA these steps.	
NOTE to NRC examiner:	
The student should prove he/she knows how to obtain these readings by going to the appropriate panel. Once this has been satisfied, give them the cues off of the attached NRC cue sheet.	
CUE: See NRC Cue sheet	
*20. Record individual percent dp indications for jet pumps 11 through 20 in Table 1 (RR H11-P619)	*20. Obtains dp% and records in Table 1.
*21. Calculate and record Recirculation Loop A Average dP (Average A) by adding dP values recorded in Table 1 for jet pumps 11 through 20 and dividing sum by 10.	*21. Calculates Jet Pump data and comes up with Average A = 26.8%.

NRC Exam 2004-301-A1.1

Jet Pump Operability Test	No.: NRC Exam 2004-301-A1.1 Revision: 0 Page 4
	r age 4
<b>NOTE to NRC examiner:</b> The answers are on the NRC cue sheet. They are there for you to verify the answers given by the examinee. DO NOT give them as CUES.	
*22. Calculate and record in Table 1, percent deviation from Loop Average for Jet Pumps 11 through 20, using the following equation:	*22. Calculates percent deviation and enters on Table 1
(Jet Pump dP – Average A)/Average A x 100.  *23. Using the deviation from Average % points recorded on Table 1, plot and verify all points are between –20% and +20% points on Attachment 5.	*23. Verified points are between –20% and +20% on Attachment 5
<b>NOTE:</b> Steps 24 through 27 are only required if the Recirculation Loop B is in operation. Otherwise, NA these steps.	
CUE: See NRC Cue sheet	
*24. Record individual percent dp indications for jet pumps 1 through 10 in Table 2 (RR H11-P619)	*24. Obtains dp% and records in Table 2.
*25. Calculate and record Recirculation Loop B Average dP (Average B) by adding dP values recorded in Table 2 for jet pumps 1 through 10 and dividing sum by 10.	*25. Calculates Jet Pump data and comes up with Average B = 29.3%.
<b>NOTE to NRC examiner:</b> The answers are on the NRC cue sheet. They are there for you to verify the answers given by the examinee. DO NOT give them as CUES.	
*26. Calculate and record in Table 2, percent deviation from Loop Average for Jet Pumps 1 through 10, using the following equation:	*26. Calculates percent deviation and enters on Table 2
(Jet Pump dP – Average B)/Average B x 100.	
*27. Using the deviation from Average % points recorded on Table 2, plot and verify all points are between –20% and +20% points on Attachment 5.	*27. Verified points are between –20% and +20% on Attachment 5
28. Record test personnel	28. Prints name, initials and signs.

<b>K/A</b> 2.1	SYSTEM: Generic Knowledge and 2.4.15 Knowledge of G		ıres associated	I with EOP implementatio	n. 3.0 / 3.5

#### Task Standard:

All steps required are completed within 15 minutes, including:

- Emergency Director approval (signature) of the notification form.
- Completion of telephone notifications to Offsite Authorities.
- All steps are completed, including 2B (phone calls).

#### **Initial Conditions:**

- The Emergency Director has just declared a Site Area Emergency due to an event in progress.
- The event in progress is that Site boundary dose rates resulting from a gaseous release exceeds 100 mrem TEDE for the projected duration of the release. (**AS1**)
- Currently the plant is degrading and a confirmatory sample is in progress.
- There is currently no precipitation.
- There are no protective action recommendations at this time.

## Initiating Cue(s):

### You are the Control Room Emergency Communicator. Your duties are to perform the following:

- Fill out the required information for a Nuclear Event Notification Form.
- Present the form to the Emergency Director for approval.
- Make the required Offsite Authority Telephone Notifications.

#### This task is time critical.

## JPM SRO A1.2 Cue Sheet

The time is 1000 Sunday morning with the plant operating at 100% power. The crew is operating with the minimum shift complement in accordance with the Shift Assignment Sheet. Security is also operating at minimum complement.

## **Initiating Cue(s):**

Frank Brown has just informed you that he is leaving immediately due to a personal emergency. He has given a turnover to J. Parent, who has just recently completed his proficiency watches as Turbine Building Rounds. You are to identify the staffing adjustments, if any, that need to be made, recommendations for call-outs, and time constraints. Vocalize your thought process and report when you have completed the task.

SYSTEM: 2.4.4	1 Knowledge of th	he emergency action leve	el thresholds	and classifications (2.3/4	1.1)

#### Task Standard:

- Classify the emergency as a General Emergency based on HG1 EP101 Enclosure A Page A-4 within 15 minutes
- Determines PAR is to evacuate Area 1 based on Security event in progress (EP-545 flowchart) within 15 minutes of classification determination
- Notifies the state authorities that it will take approximately 3 hours and 10 minutes to evacuate based on enclosure D of EP-545
- Notifies the state authorities that approximately 5,156 people will need to be evacuated based on enclosure E of EP-545

#### **Initial Conditions:**

You are an extra SRO assigned to implement the E-Plan.

The Date is February 3<sup>rd</sup>, 2004. Time is 1200 p.m. (noon)

Current weather conditions are a snow and rain mixture with winds at 90° (towards the lake)

A security event is in progress that has caused fuel damage. Intruders are in control of some of the equipment necessary to maintain the safety functions.

The STA has accumulated the following data:

- SGTS Div 1 and Div 2 AXM Channel 3 indicate 200μCt/cc and has been confirmed to be valid
- These measurements are expected to continue for 1 hour
- Sample analysis indicate a combined radioiodine concentration of 100 DAC and is expected to continue for <1 hour</li>

### Initiating Cue(s):

Based on the information given:

- 1. Classify the event
- 2. If required, provide PAR

Note to NRC examiner: This cue will not be given unless the Classification is done correctly.

Provide state authorities with estimated time for evacuation and estimated population.
